

Homework #1

Instructor: Dr. Zafeirakis Zafeirakopoulos*Assistant:* Gizem Süngü

Course Policy: Read all the instructions below carefully before you start working on the assignment, and before you make a submission.

- It is not a group homework. Do not share your answers to anyone in any circumstance. Any cheating means at least -100 for both sides.
- Do not take any information from Internet.
- No late homework will be accepted.
- For any questions about the homework, send an email to gizemsungu@gtu.edu.tr
- The homeworks (both latex and pdf files in a zip file) will be submitted into the course page of Moodle.
- The latex, pdf and zip files of the homeworks should be saved as "Name_Surname_StudentId".{tex, pdf, zip}.
- If the answers of the homeworks have only calculations without any formula or any explanation -when needed- will get zero.
- Writing the homeworks on Latex is strongly suggested. However, hand-written paper is still accepted **IFF** hand writing of the student is clear and understandable to read, and the paper is well-organized. Otherwise, the assistant cannot grade the student's homework.

Problem 1: Conditional Statements

(5+5+5=15 points)

State the converse, contrapositive, and inverse of each of these conditional statements.

(a) If it snows tonight, then I will stay at home.

(Solution)

Converse: If I stay at home then it will snow

Contrapositive: If I will not stay at home then it will not snow

Inverse: If it doesn't snow tonight then I will not stay at home

(b) I go to the beach whenever it is a sunny summer day.

(Solution)

Converse: If I go to the beach then it is a sunny summer day

Contrapositive: If I don't go to the beach then it is not a sunny summer day

Inverse: If it isn't a sunny summer day then I don't go to the beach

(c) If I stay up late, then I sleep until noon.

(Solution)

Converse: If I sleep until noon then I will stay up late

Contrapositive: If I don't sleep until noon then I will not stay up late

Inverse: If I don't stay up late then I don't sleep until noon

Problem 2: Truth Tables For Logic Operators

(5+5+5=15 points)

Construct a truth table for each of the following compound propositions.

(a) $(p \oplus \neg q)$

(Solution)

p	q	$\neg q$	$(p \oplus \neg q)$
1	1	0	1
1	0	1	0
0	1	0	0
0	0	1	1

(b) $(p \iff q) \oplus (\neg p \iff \neg r)$

(Solution)

p	q	r	$\neg p$	$\neg r$	$p \iff q$	$\neg p \iff \neg r$	$(p \iff q) \oplus (\neg p \iff \neg r)$
1	1	1	0	0	1	1	0
1	1	0	0	1	1	0	1
1	0	1	0	0	0	1	1
0	1	1	1	0	0	0	0
1	0	0	0	1	0	0	0
0	1	0	1	1	0	1	1
0	0	1	1	0	1	0	1
0	0	0	1	1	1	1	0

(c) $(p \oplus q) \Rightarrow (p \oplus \neg q)$

(Solution)

p	q	$\neg q$	$(p \oplus q)$	$(p \oplus \neg q)$	$(p \oplus q) \Rightarrow (p \oplus \neg q)$
1	1	0	0	1	1
1	0	1	1	0	0
0	1	0	1	0	0
0	0	1	0	1	1

Problem 3: Predicates and Quantifiers

(21 points)

There are three predicate logic statements which represent English sentences as follows.

- $P(x)$: "x can speak English."
- $Q(x)$: "x knows Python."
- $H(x)$: "x is happy."

Express each of the following sentences in terms of $P(x)$, $Q(x)$, $H(x)$, quantifiers, and logical connectives or vice versa. The domain for quantifiers consists of all students at the university.

(a) There is a student at the university who can speak English and who knows Python.

(Solution)

$$\exists x(P(x) \wedge Q(x))$$

(b) There is a student at the university who can speak English but who doesn't know Python.

(Solution)

$$\exists x(P(x) \wedge \neg Q(x))$$

(c) Every student at the university either can speak English or knows Python.

(Solution)

$$\forall x(P(x) \oplus Q(x))$$

(d) No student at the university can speak English or knows Python.

(Solution)

$$\neg \exists x(P(x) \vee Q(x))$$

(e) If there is a student at the university who can speak English and know Python, then she/he is happy.

(Solution)

$$\forall x((P(x) \wedge Q(x)) \Rightarrow H(x))$$

(f) At least two students are happy.

(Solution)

$$\exists x H(x)$$

(g) $\neg \forall x(Q(x) \wedge P(x))$

(Solution)

Not every student know Python and can speak English

Problem 4: Mathematical Induction

(21 points)

Prove that $3 + 3 \cdot 5 + 3 \cdot 5^2 + \dots + 3 \cdot 5^n = \frac{3(5^{n+1}-1)}{4}$ whenever n is a nonnegative integer.

(Solution)

$$\text{for } n = 0 \quad 3 = \frac{3 \times (5-1)}{4} \Rightarrow 3 = 3$$

$$\text{for } n = k \quad 3 + 3 \times 5 + \dots + 3 \times 5^k + 3 \times 5^{k+1} = \frac{3 \times (5^{k+1}-1)}{4}$$

$$\text{for } n = k+1 \quad 3 + 3 \times 5 + \dots + 3 \times 5^{k+1} + 3 \times 5^{k+2} = \frac{3 \times (5^{k+2} - 1)}{4}$$

If we subtract the second equation from the third equation, we get:

$$3 \times 5^{k+1} = \frac{3 \times (5^{k+2} - 1) - 3 \times (5^{k+1} - 1)}{4}$$

$$3 \times 5^{k+1} = \frac{3 \times 5^{k+2} - 3 \times 5^{k+1} - 3 + 3}{4}$$

$$3 \times 5^{k+1} = \frac{3 \times 5^{k+1} \times (5 - 1)}{4}$$

$$3 \times 5^{k+1} = 3 \times 5^{k+1}$$

Problem 5: Mathematical Induction

(20 points)

Prove that $n^2 - 1$ is divisible by 8 whenever n is an odd positive integer.

(Solution)

$$\text{for } n = 1 \quad 1^2 - 1 = 0 \text{ (it is divisible by 8)}$$

$$\text{for } n = 2k+1 \quad (2 \times (k+1))^2 - 1 = 2 \times (k+1) \times (k)$$

$$\text{for } n = 2k+3 \quad (2 \times (k+3))^2 - 1 = (2 \times k+4) \times (2 \times k+2)$$

$$= 4 \times k^2 + 12 \times k + 8$$

for any integer of x

$$= 4 \times (k^2 + 3 \times k + 2) = 4 \times (k+2)(k+1) = 8 \times x$$

$$= (k+2)(k+1) = 2 \times x$$

It is guarantee that an expression like $k+2$ times $k+1$ is divisible by 2

Problem 6: Sets

(8 points)

Which of the following sets are equal? Show your work step by step.

(a) $\{t : t \text{ is a root of } x^2 - 6x + 8 = 0\}$

$$a = \{2, 4\}$$

(b) $\{y : y \text{ is a real number in the closed interval } [2, 3]\}$

$$b = [2, 3]$$

(c) $\{4, 2, 5, 4\}$

$$c = \{2, 4, 5\}$$

(d) $\{4, 5, 7, 2\} - \{5, 7\}$

$$d = \{2, 4\}$$

(e) $\{q: q \text{ is either the number of sides of a rectangle or the number of digits in any integer between 11 and 99}\}$

$$e = \{2\} \vee \{3\}$$

(Solution)

We can find elements of the set a by delta

$$\Delta = b^2 - 4ac$$
$$x_{1,2} = \frac{-b \pm \sqrt{\Delta}}{2 \times a}$$

The set a and the set d are equal

Problem Bonus: Logic in Algorithms

(20 points)

Let p and q be the statements as follows.

- p : It is sunny.
- q : The flowers are blooming.

Figure 1: Combinational Circuit

In Figure 1, the two statements are used as input. The circuit has 3 gates as AND, OR and NOT operators. It has also a 2x1 multiplexer¹ which provides to select one of the two options.

(a) Write the sentence that "result" output has.

(Solution)

(b) Convert Figure 1 to an algorithm which you can write in any programming language that you prefer (including pseudocode).

(Solution)
